# Create Entity Relationship Diagram using Quick DBD

Export the schema from QuickDBD and make required changes.

Open PG Admin and Create Employee DB

Import Schema SQL export from Quick DBD and ensure below tables are created with all columns and constraints.

Import data into tables using Import/Export Data tables and ensure header is selected under 'Options' tab.

Ensure record counts matches with csv data for each table.

Open "employeeSQL_Queries" SQL Source file using pg admin under "Employee_DB/postgres@POSTGRE SQL 15 "connection and execute each select query to view the result of the each data analysis.
